iOS Engineer

Description

- BSc. and / or MSc. in Computer Science, Electrical/Computer Engineering or any related technical discipline.
- Minimum 3+ years' working experience & proven technical experience in developing and delivering production grade native iOS applications using Swift.
- Good understanding of modern iOS architectural approaches (MVVM).
- Familiarity with consuming RESTful APIs and other back-end services.
- Deep understanding of iOS Operating Systems, as well as the limitations and behavior that come with different hardware and software versions.
- Experience with Performance Testing and Verification (unit, system, integration and acceptance testing).
- We are a multinational company, fluency in English is a must.
- We thrive through team collaboration, we are on the lookout for team players.

Responsibilities

- Participating in the development of native iOS applications used by thousands of customers daily.
- Contributing with your technical expertise in the entire development life-cycle of the application & architectural decisions.
- Resolving challenging technical problems and taking part in reshaping the electric cars ecosystem.
- Investigating new technologies/methodologies to make the development faster and keep up-to-date with the latest trends
- Working within a cross functional team alongside Software Engineers from different crafts with agile methodologies.
